1. Supplementary data

1.1 Overview of ground truth data

Supplementary Table 1 summarizes information about our ground truth data from 16 cities in six sub-Saharan African countries.

Supplementary Table 1 | Overview of ground truth data. Clusters/pockets of informal settlements are small, fragmented areas that precisely outline groups of several informal dwellings (as opposed to more broadly outlined entire informal settlements that can also contain green spaces, institutional buildings etc.). Data for Nyala, Sudan (2013) and Kampala, Uganda (2014) was matched with closest possible Sentinel-2 satellite imagery (2015). Subscript numbers link to the original data source, listed on the following page.

City	Geographic scope within city	Year	Mapped objects	Original data format	Original mapping method	Own data editing	Data provider
<i>Kenya</i>							
Kisumu ¹	7 informal settlements (Bondeni, Obunga, Nyawita, Kaloleni, Nyalenda, Manyatta A, Manyatta B) in 1 map	2020	Coordinates of public facilities in informal settlements	Shapefile – points			UN-Habitat
Nairobi ¹	3 informal settlements (Kawangware, Kibera, Mathare) in 3 maps	2020	Coordinates of public facilities in informal settlements	Shapefile – points	Field-based mapping	Manual drawing of polygons of informal settlements (guided by maps in official reports)	UN-Habitat
Nairobi ²	3 informal (Eastleigh, Korochogo, Viwandani) settlements in 3 maps	2015	Boundaries of informal settlements	PDF			Concern Worldwide
<i>Sierra Leone</i>							
Freetown ²	Entire city	2022	Boundaries of informal settlements	Shapefile – polygons	Field-based mapping	Dissolving of overlapping polygons and filling of small holes	CODOHSAPA
<i>South Africa</i>							
Cape Town ³	Entire city	2016	Boundaries of clusters/pockets of informal settlements	Shapefile – polygons	Digitization of hard copy map of informal settlements from City of Cape Town	none	Openup + Ndifuna Ukwazi + Social Justice Coalition + International Budget Partnership

Durban ⁴		2022	Boundaries of clusters/pockets of informal settlements	n.a.	Municipality of eThekweni
Embalenhle ²		2022	Boundaries of informal settlements	Visual interpretation of VHR satellite imagery (Google Earth Pro / Maxar)	Nova Institute
Lebohang ²		2022	Boundaries of informal settlements	Visual interpretation of VHR satellite imagery (Google Earth Pro / Maxar)	Nova Institute
<i>Sudan</i>					
Nyala ⁵	Entire city	2013	Boundaries of formal residential areas, informal settlements, refugee camps (+ individual dwellings)	GeoPDF	Visual interpretation of VHR satellite imagery (Worldview-2) and ancillary data Manual drawing of polygons of informal settlements (over GeoPDF map) Copernicus (EU)
<i>Tanzania</i>					
Arusha ⁶		2015			
Dodoma ⁷		2016	Boundaries of clusters/pockets of planned settlements and unplanned settlements (in residential areas and commercial areas)	Shapefile – polygons	Visual interpretation of VHR satellite imagery (Worldview-2/GeoEye-1 /Pleiades) none World Bank (EO4SD)
Kigoma ⁸		2016			
Mbeya ⁹	Core urban area	2017			
Mtwara ¹⁰		2017			
Mwanza ¹¹		2015			
Tanga ¹²		2018			
<i>Uganda</i>					
Kampala ¹³	Entire city	2014	Boundaries of informal settlements	PDF	Focus groups, informal meetings, field observations (transect walks) Manual drawing of polygons of informal settlements (guided by maps in official reports) Actogether Uganda + National Slum Dwellers Federation Uganda + Slum Dwellers International + Comic Relief

1.2 Availability of “cloud-free” satellite images

Supplementary Figure 1 maps for all 529 cities in 2016 and 2022 the number of available and utilized satellite images with a cloud coverage of less than 15% (“cloud-free”). In addition, Supplementary Figure 2 illustrates the same statistics aggregated at the country-level. It shows country-level means – as unweighted means (panels a and b), city-area-weighted means (panels c and d), and city-population-weighted means (panels e and f).

Supplementary Figure 1 | Number of “cloud-free” satellite images used for predictions – per city (2016 and 2022). Number of satellite images with less than 15% cloud coverage used for predictions in 2016 (a) and 2022 (b) for 529 cities. Circle area is proportional to cities’ total population size (in 2015, according to Africapolis estimates).

Supplementary Figure 2 | Average number of “cloud-free” satellite images used for predictions – per country (2016 and 2022). Average number of satellite images with less than 15% cloud coverage used for predictions in 2016 (a, c, e) and 2022 (b, d, f) for 44 cities. Unweighted means (a, b), city-area-weighted means (c, d), and city-population-weighted means (e, f).

2. Supplementary methods

2.1 Binarization of segmentation maps – calibration against UN-Habitat estimates

Supplementary Table 2 provides a comparison of the estimates of the share of the urban population living in informal settlements at the country-level from UN-Habitat (col. 2) and our predicted estimates in 2020 – using three alternative binarization thresholds: 1/5 (col.3), 1/4 (col. 4), and 1/3 (col. 5). Columns 6-8 present the corresponding differences in percentage points between the UN-Habitat estimates and our predicated estimates. Boldface indicates the chosen threshold value that minimizes this difference for each country. For nine countries, no UN-Habitat data was available. In these cases, we selected the modal threshold value of all neighboring countries.

Supplementary Table 2 | Share of urban population living in informal settlements, country-level, 2020 – UN-Habitat estimates versus our estimates. UN-Habitat estimates come from the Global Urban Indicators Database 2020. UN-Habitat data was unavailable (–) for nine of our 44 included countries. 1/5, 1/4, and 1/3 are the thresholds used to create the binary segmentation maps and to calculate country- and city-level estimates of informal settlements prevalence. Boldface indicates which threshold was chosen for each country to minimize differences between our estimates and UN-Habitat estimates.

Country	UN-Habitat estimates (%)	Our estimates (%)			Difference: our estimates vs UN-Habitat estimates (pp)		
		1/5	1/4	1/3	1/5	1/4	1/3
Angola	62.6	53.7	43.4	27.4	-8.9	-19.2	-35.2
Benin	67.9	59.8	48.8	31.9	-8.1	-19.1	-36.0

Zimbabwe	21.6	22.7	14.1	6.8	1.1	-7.5	-14.8

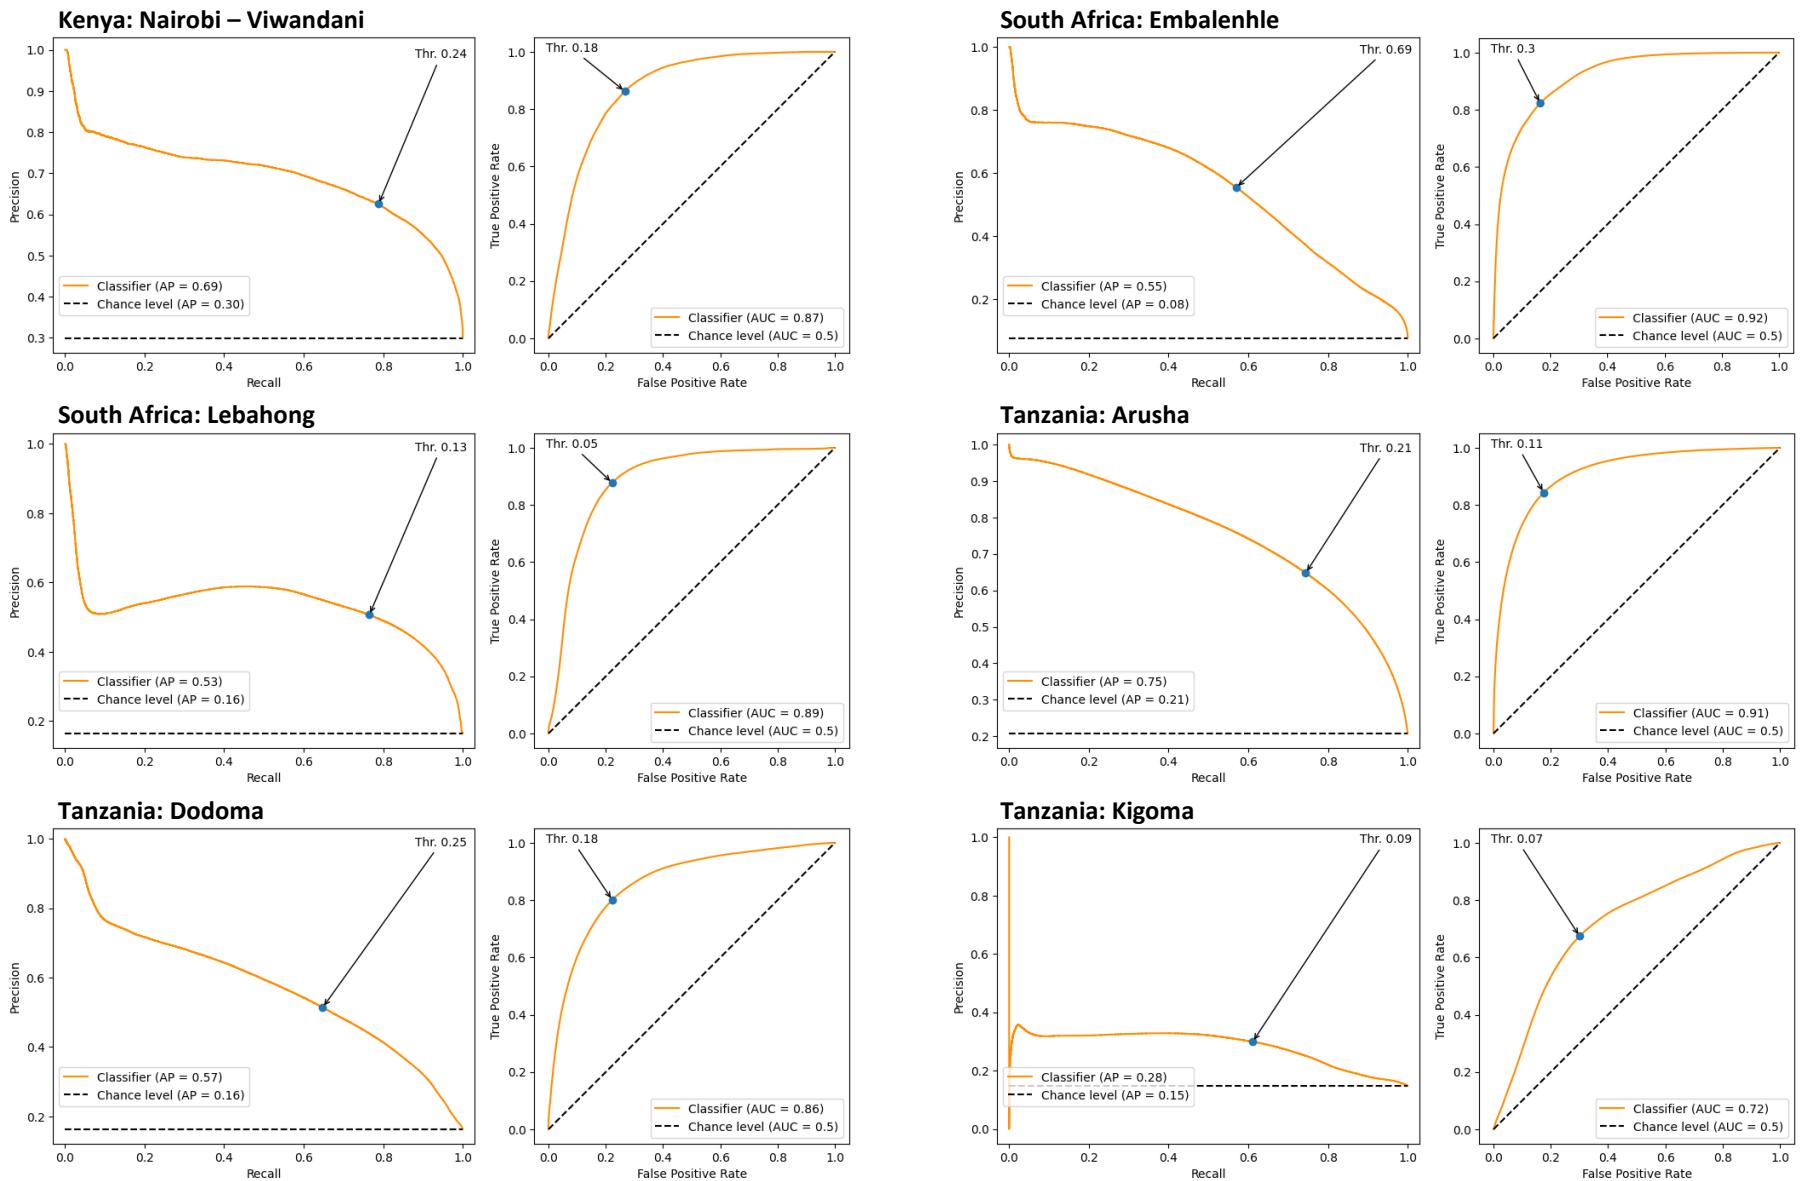

2.2 Performance evaluations statistics

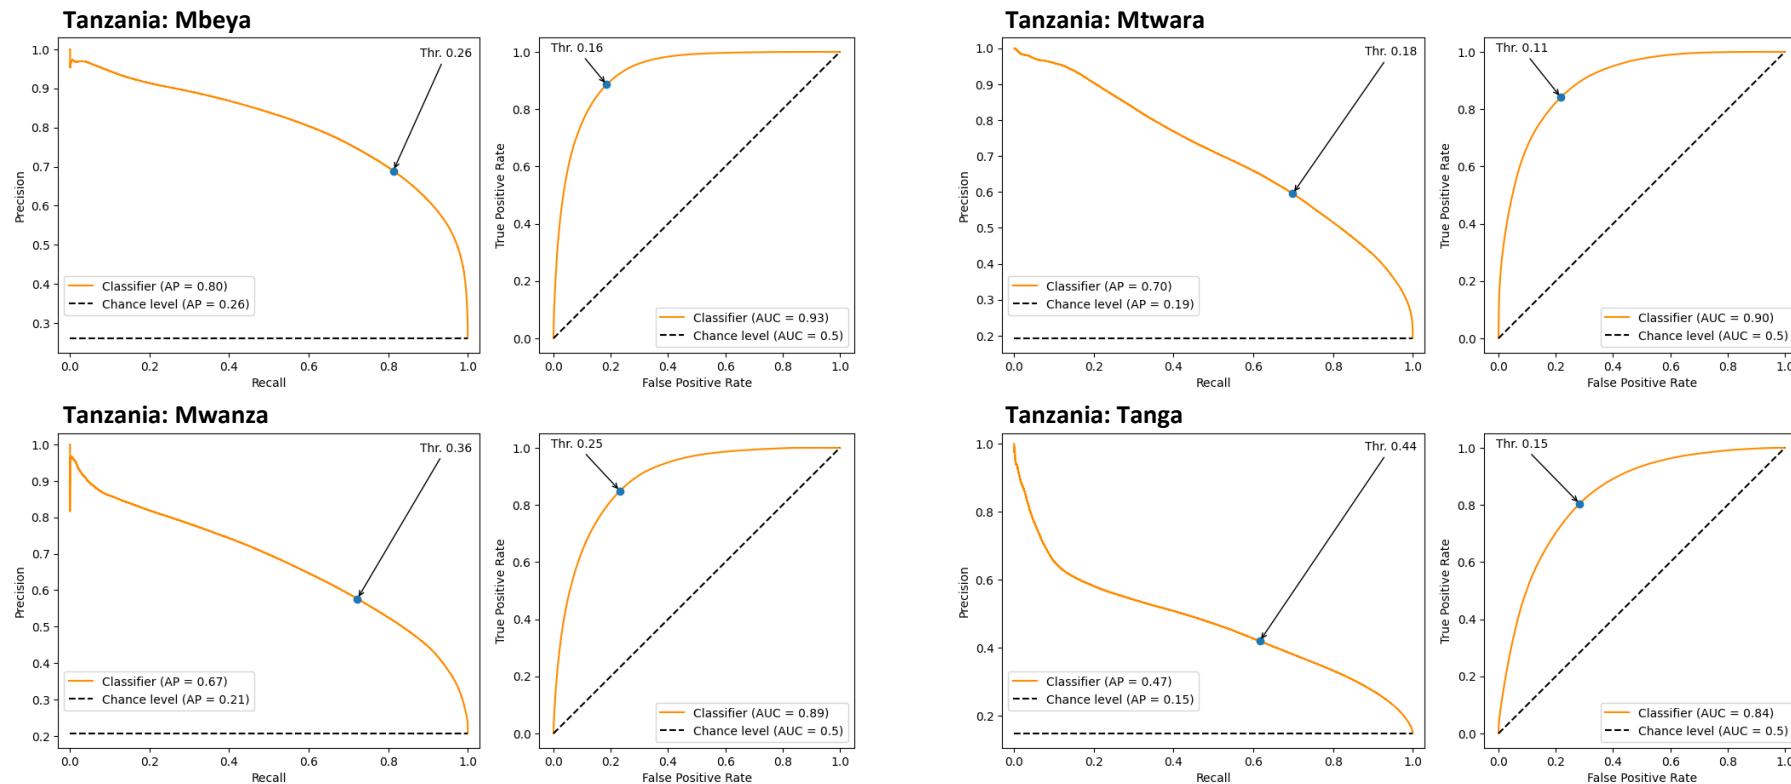

Supplementary Table 3 provides evaluation statistics based on country-specific models. These country-specific models were later aggregated for the ensemble prediction, together with the Freetown-Kampala-Nyala-Mtware-Embalenhe-Kisumu model. Models were evaluated for each city, such that the model was trained on all cities in the country except the city of interest. In addition, Supplementary Figure 3 provides the Precision-Recall Curve and the Receiver Operating Characteristic (ROC) Curve for the same cities. Lastly, Supplementary Figure 4 visualizes the performance of our predictions within cities, i.e., it shows the distribution of true/false positives/negatives across pixels within cities with ground truth data. All evaluation statistics were based on the binary segmentation maps with the country-specific optimum threshold value.

Supplementary Table 3 | Performance evaluation metrics for country-specific models. Each row presents evaluation metrics based on a country-specific model, i.e., the model was trained on all cities in the respective country except the city that it is evaluated on. IoU = Intersection over Unit. All statistics are naturally bounded between 0 and 100 and expressed in %. Values based on binary segmentation maps with threshold values 1/5 for Kenya and 1/3 for South Africa and Tanzania.

City	Precision	Recall	F1 Score	Specificity	Accuracy	IoU
<i>Kenya</i>						
Kisumu	42.41	82.17	55.82	61.97	67.06	38.77
Nairobi – Eastleigh	73.06	65.37	68.87	63.94	64.8	52.62
Nairobi – Kawangware	72.41	56.08	62.44	77.05	66.41	46.17
Nairobi – Kibera	69.60	96.38	80.6	66.64	79.6	67.57
Nairobi – Korochogo	71.25	94.98	81.3	35.59	72.71	68.51
Nairobi – Mathare	69.02	97.63	80.85	80.15	85.6	67.86
Nairobi – Viwandani	60.05	83.86	69.52	75.64	78.05	53.31
<i>South Africa</i>						
Embalenhe	33.32	80.79	46.24	84.95	84.63	30.33
Lebohang	57.54	56.77	56.98	91.74	85.98	40.03
<i>Tanzania</i>						
Arusha	71.03	65.31	68.01	92.99	87.23	51.57
Dodoma	60.14	48.85	53.85	93.66	86.34	36.85
Kigoma	32.51	25.9	28.72	90.62	81.05	16.78
Mbeya	72.19	76.4	74.13	89.55	86.11	58.95
Mtware	70.01	52.63	59.97	94.56	86.46	42.85
Mwanza	55.53	75.57	63.97	84.14	82.36	47.05
Tanga	38.85	68.44	49.48	81.2	79.31	32.88
Mean	59.31	70.45	62.55	79.02	79.61	47.01
Median	64.58	72.01	63.21	82.67	81.71	46.61

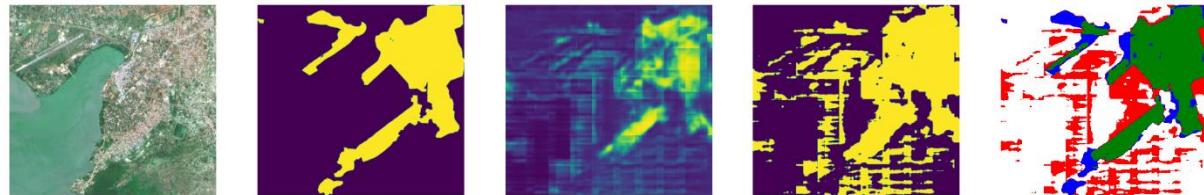

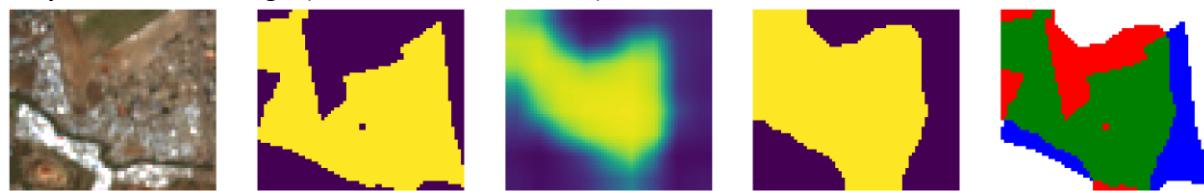

Supplementary Figure 3 | Performance evaluation graphs for country-specific models. For each city the Precision-Recall curve is shown on the left and the ROC curve is shown on the right. The blue dot and arrow indicate the threshold for binary segmentation that jointly optimizes Precision and Recall (i.e., the F1 score) or TPR and FPR, respectively. In each plot, the solid orange line (classifier) denotes the performance of the model trained on all cities from the same country except the city in the plot title, for which the performance is evaluated. The black dotted line always denotes the chance level, i.e., the performance of a hypothetical random guesser for the classification of each pixel in a given city. For the ROC curve, in expectation, random guessing results in an area under curve (AUC) equal to 0.5, whereas for the Precision-Recall curve, the expected performance of a random guesser is always equal to the proportion of positive pixels (the ones belonging to informal settlements) in the ground truth.

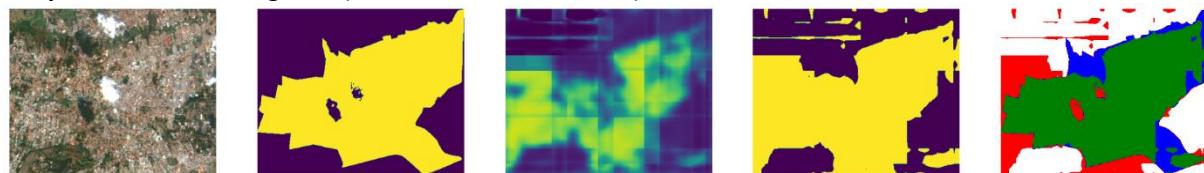

Kenya: Kisumu (Tile size: 8.42km x 9.19km)

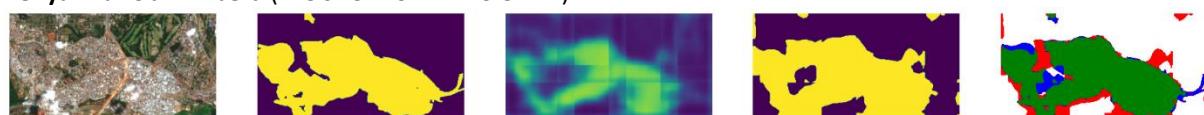

Kenya: Nairobi – Eastleigh (Tile size: 0.57km x 0.65km)

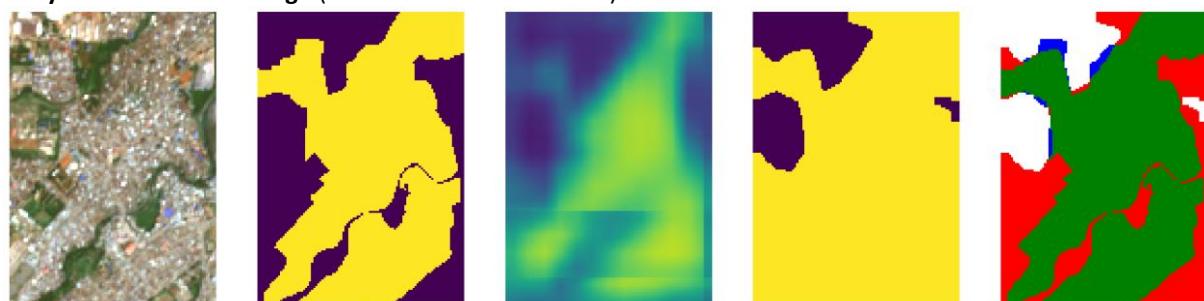

Kenya: Nairobi – Kawangware (Tile size: 3.42km x 4.29km)

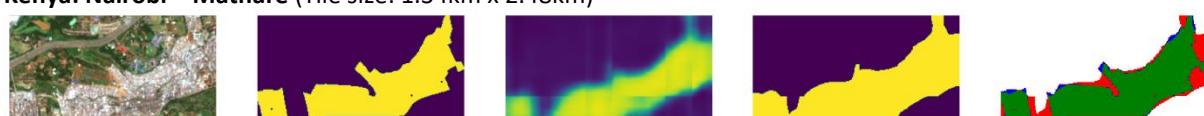

Kenya: Nairobi – Kibera (Tile size: 1.92km x 3.84km)

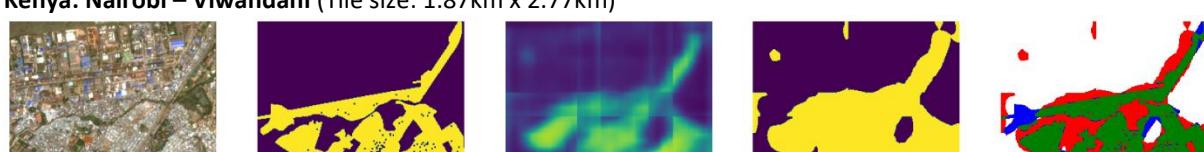

Kenya: Nairobi – Korochogo (Tile size: 1.43km x 1.00km)

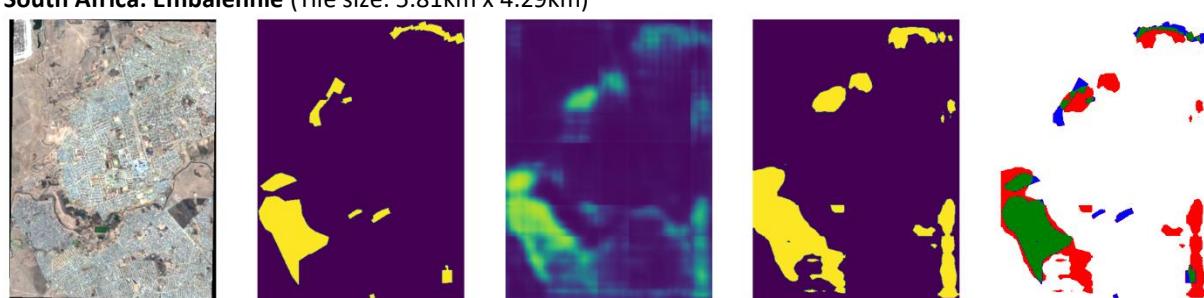

Kenya: Nairobi – Mathare (Tile size: 1.34km x 2.48km)

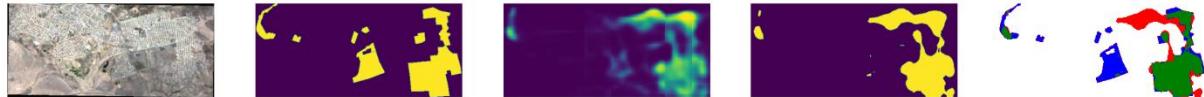

Kenya: Nairobi – Viwandani (Tile size: 1.87km x 2.77km)

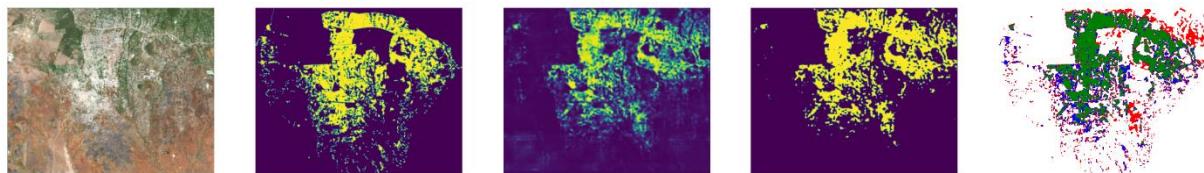

South Africa: Embalenhle (Tile size: 5.81km x 4.29km)

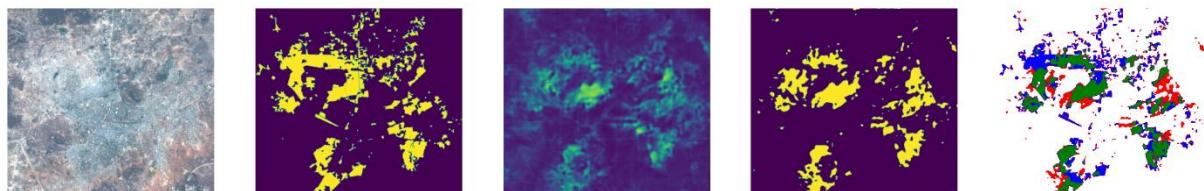

South Africa: Lebohang (Tile size: 2.21km x 4.91km)

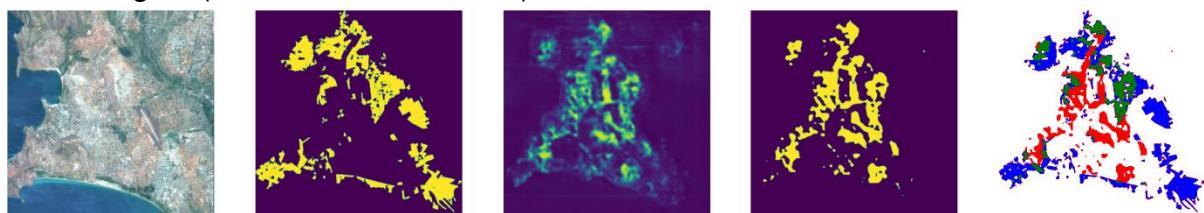

Tanzania: Arusha (Tile size: 15.59km x 19.41km)

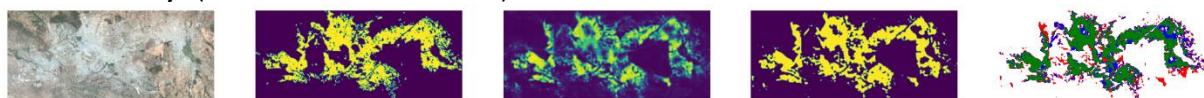

Tanzania: Dodoma (Tile size: 12.69km x 14.11km)

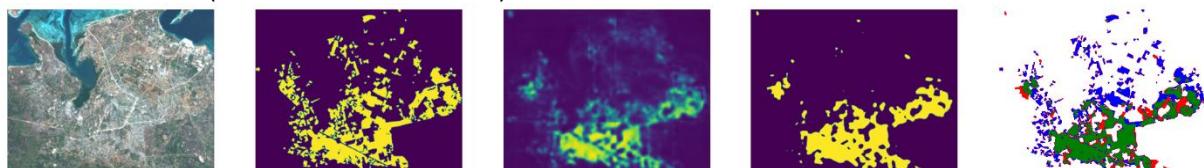

Tanzania: Kigoma (Tile size: 10.69km x 10.73km)

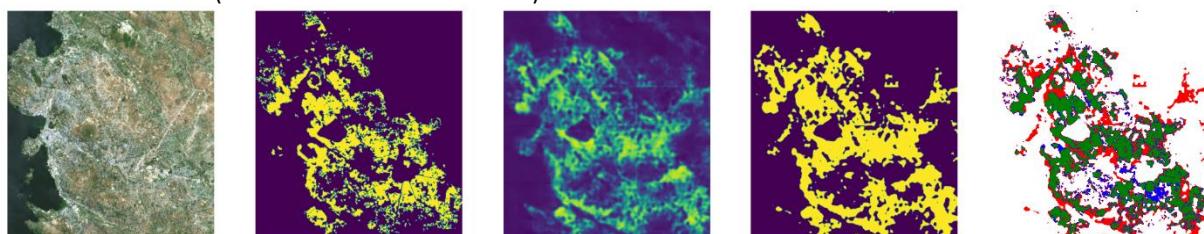

Tanzania: Mbeya (Tile size: 8.91km x 20.96km)

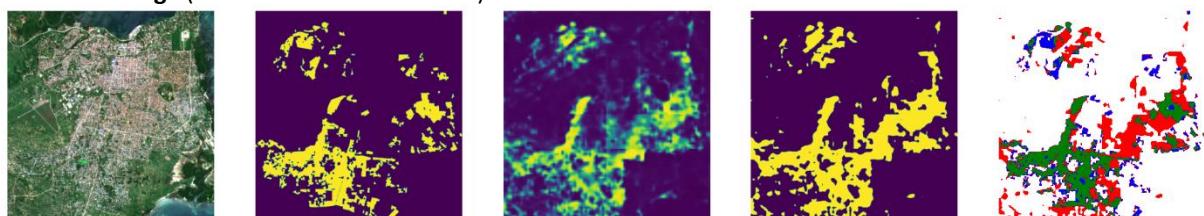

Tanzania: Mtwara (Tile size: 7.38km x 9.38km)

Tanzania: Mwanza (Tile size: 15.18km x 13.88km)

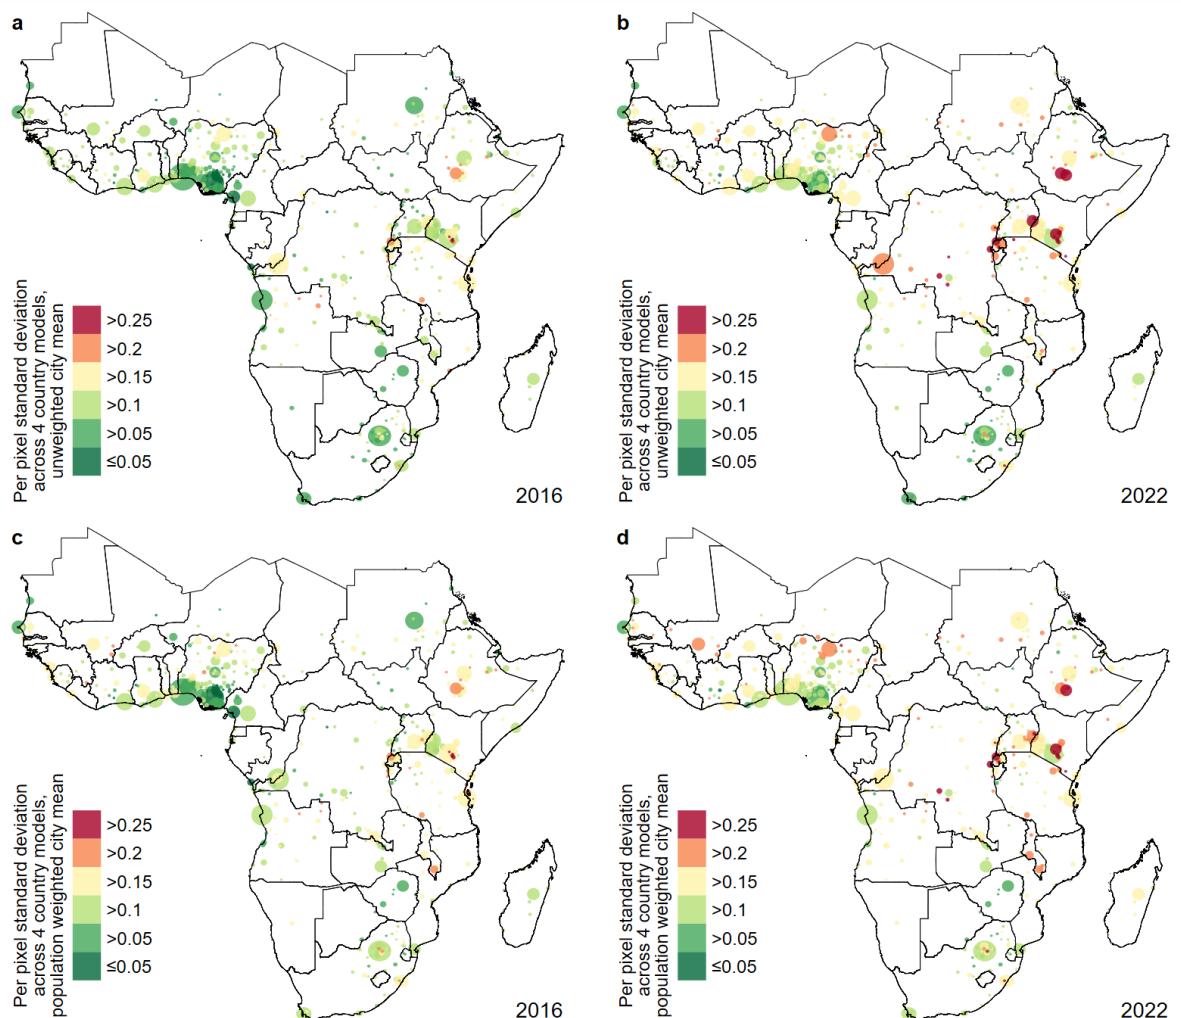

Tanzania: Tanga (Tile size: 7.82km x 7.72km)

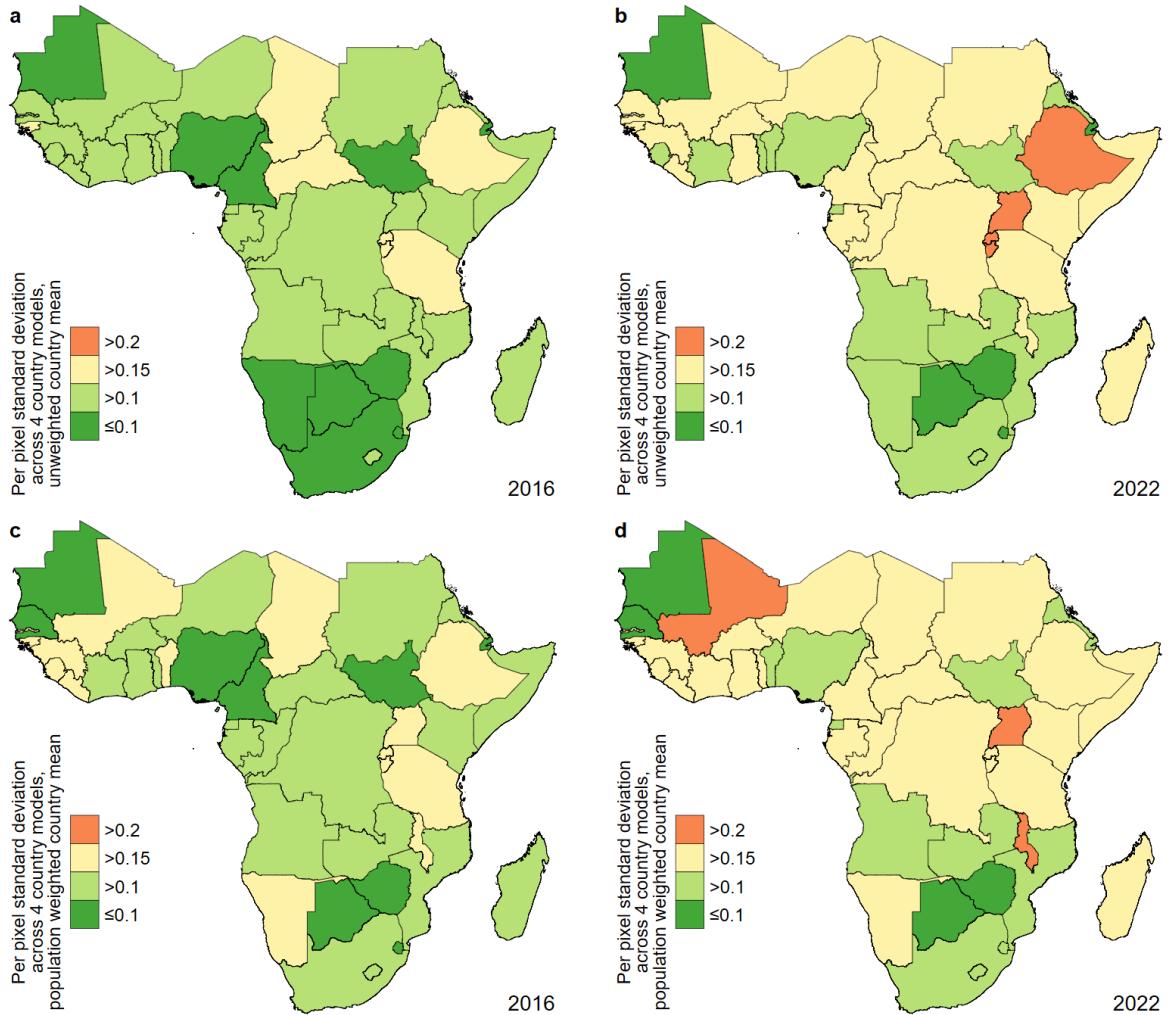

Supplementary Figure 4 | Visualization of predictions and corresponding performance evaluations for country-specific models. For each city from left to right: 1) input satellite image, 2) binary ground truth raster, 3) raw (continuous) prediction map, 4) binary segmentation map, 5) classification of pixels into true positives (green), false positives (red), true negatives (white), and false negatives (blue). Binarization thresholds were 0.2 for Kenya, and 0.33 for South Africa and Tanzania.

2.3 Per-pixel standard deviation of predictions across country-specific models

Supplementary Figure 5 maps for all 529 cities in 2016 and 2022 the average per-pixel standard deviation of predictions across country-specific models – once as unweighted means (panels a and b) and once as population-weighted means (panels c and d). In addition, Supplementary Figure 6 illustrates the same statistics aggregated at the country-level.

Supplementary Figure 5 |Per-pixel standard deviation of predictions across country-specific models – per city (2016 and 2022). Unweighted means (a and b) and population-weighted means (c and d) in 2016 (a and c) and 2022 (b and d) for 529 cities. Circle area is proportional to cities' total population size (in 2015, according to Africapolis estimates).

Supplementary Figure 6 | Per-pixel standard deviation of predictions across country-specific models – per country (2016 and 2022). Unweighted means (a and b) and population-weighted means (c and d) in 2016 (a and c) and 2022 (b and d) for 44 countries.

3. Supplementary results

3.1 Comprehensive results

Supplementary Table 4 provides comprehensive results for all 529 cities. It contains city-level estimates of the share of the urban area (col. 1-3), the share of the urban population (col. 4-6), and the total urban population (col. 7-9) living in informal settlements. This includes estimates of 2016 (col. 1, 4, and 7), estimates of 2022 (col. 2, 5, and 8), and estimates of the changes between 2016 and 2022 (col. 3, 6, and 9). In addition, Supplementary Table 5 illustrates the same statistics aggregated at the country-level for 44 countries.

Supplementary Table 4 | City-level estimates of informal settlement prevalence and growth across sub-Saharan Africa (2016–2022). From left to right: share of the urban area covered by informal settlements, share of the urban population living in informal settlements, and total population living in informal settlements. Estimates for 2016, 2022, and change between 2016 and 2022. All estimates are based on binary segmentation maps with the thresholds illustrated in Supplementary Table 2.

City	Area share			Population share			Total population		
	2016 (%)	2022 (%)	2016-'22 (pp)	2016 (%)	2022 (%)	2016-'22 (pp)	2016	2022	2016-'22 (in thousands)

Supplementary Table 5 | Country-level estimates of informal settlement prevalence and growth across sub-Saharan Africa (2016–2022). From left to right: share of the urban area covered by informal settlements, share of the urban population living in informal settlements, and total population living in informal settlements. Estimates for 2016, 2022, and change between 2016 and 2022. All estimates are based on binary segmentation maps with the thresholds illustrated in Supplementary Table 2.

Country	Area share			Population share			Total population		
	2016 (%)	2022 (%)	2016–‘22 (pp)	2016 (%)	2022 (%)	2016–‘22 (pp)	2016 (in thousands)	2022 (in thousands)	2016–‘22 (in thousands)
